

PARACHUTE RED ROCKET MK8A

DISTRESS SIGNAL ↓

The Parachute Red Rocket is a day or night long-range distress signal that conforms to SOLAS 74/88 as amended. Designed to withstand exceptional environmental exposure and to perform reliably even after immersion in water, the pull-wire ignitor and improved grip provide easy handling. Ejecting a red flare on a parachute at 300m (1000ft), burning for 40 seconds at 30,000 candela.

Twelve should be carried on the ship's bridge and four are required in a ship's lifeboats and liferafts. They are also suitable for use in other commercial and recreational boats.
