

FOAM CARTRIDGE

FIRE EXTINGUISHER

Our 9 L foam extinguisher gives you a specially blended high performance AFFF additive enabling you to fight fires quicker and efficiently. Survitec's range of fire extinguishers offers you higher fire ratings, easier fire fighting capability and increased levels of user safety.

Our foam portable fire extinguishers have a nozzle design that produce small individual droplets and not a jet. The droplets does not touch each other, which prevents electric current to be conducted. Because of this, they can be used on voltage up to 35kV with adequate training. In addition, these small droplets increase the energy absorption, making the extinguisher more efficient.

Instructions For Use

1. Pull out the safety pin
2. Strike by pressing handle
3. Control the flow rate by squeezing the final control valve and direct the spray at the base of the fire

Operation

Once the safety pin has been removed, the device is pressurised by pressing on the striking handle. The flow rate is controlled by the final control valve. The fact that it is so simple to use means that risks of incorrect use are greatly reduced.

Pressurisation During Use

Striking the internal cartridge releases the propellant (CO₂), pressurises the body and thus causes the foam to be discharged. The cartridge is interchangeable and its level can be checked accurately by weighing, so the extinguisher can be refilled on site without having to send it back to the factory. Both preventive and corrective maintenance can therefore be carried out in optimum conditions.
